

Ascent Solar produces lightweight and flexible modules that are more affordable than most traditional solar panels. The unique technology, based on Ascent Solar's proprietary flexible thin-film CIGS, enables a variety of innovative and high value applications. These solar modules can be integrated into electronics, military and consumer portable power products, transportation systems, building elements, and space / near-space applications resulting in a market of differentiated solutions. The use of light weight solar modules and roll out applications also reduces costs improving project level returns.
